## **EZ+ Equine Treatment for Scratches and Thrush**

### **SCRATCHES**

Scratches is a term used referring to a skin condition effecting lower legs of horses caused by fungus or bacteria and possibly a combination of both organisms most prevalent on pastern and fetlock. These organisms thrive in just such environments. There are many treatments that have shown very little effectiveness on these organisms related to scratches using cutting edge technology. After years of trials and testing, Animal Product Technologies has the answer to this long time problem with their scratches formulations. This formulation has broad spectrum effectiveness it makes no difference whether infectious cells are bacterial, fungal or viral the oxygen activated formula easily deactivates anaerobic bacteria. The way it works is it oxidizes the cell wall of bacteria causing it to lyses or bleed out. Does not poison cell, but rather it shuts down it's metabolic process with no chance of chemical mutation or developing a more resistant strain of organism. Our formula contains natural anti-inflammatory components that reduce pain and swelling, penetrates the tissue continuing to deactivate fungus and bacteria to other infectious problems. Softens skin making it less prone to cracking. Also, softening scabs for easy removal. Highly effective. Safe and easy to use.

### **THRUSH**

Thrush is a bacteria or fungal infection of the frog. It survives without the presents of oxygen. Thrives in moist, high organic areas such as wet stalls or stagnant water. When bacteria comes in contact with frog it attaches itself to the outer tissue. It can then penetrate the vascular tissue called the digital cushion. When this occurs there is a black puss and pungent odor. If treated early, thrush can be deactivated easily. If not treated it can cause lameness and horse will be rendered out of commission. EZ+ Equine Treatment's unique broad spectrum formulation easily deactivates the organisms associate with thrush eliminating odor and infectious bacterial or fungal elements that effect the horses health keeping sole pliable and free of disease. Fast, safe and easy to use.

### **SCRATCHES AND THRUSH PRODUCT**

EZ+ Equine Treatment for Scratches and Thrush is used by Farriers, Ranchers-Horsemen, and Veterinarian's throughout the Western States for the past two years. Benefits: no shaving of leg or wrapping required, no odor or color can be used on show horses. Effective on both bacteria and fungi. Non mutagenic / non toxic / no dermal irritating. Relieves pain and swelling. Cost effective, biologically safe, environmentally safe. Provides quick and effective solutions for hoof and leg infections.

Endorsed by Veterinarian's.
